We are pleased to invite you to

**Summer School on Next Generation Paradigms in IT**

5-6 August 2014

MIMOS, Kuala Lumpur, MALAYSIA

MIMOS is pleased to organise a two-day Summer School on Next Generation Paradigms in IT, to be held at our campus in Technology Park Malaysia, Kuala Lumpur on 5-6 Aug 2014.

This summer school will examine the various emerging paradigms and explain some of the important concepts that are used to work with them. Topics include Information Security, Cyber Physical Systems, Semantics, Cloud Computing and Big Data. International experts who will conduct the various tutorials at the school include Australia’s Prof Tharam Dillon and Prof Elizabeth Chang, Prof Ernesto Damiani (Italy), Prof Robert A. Meersman (Belgium), and India Dr Mukesh Mohania (India). More world-renowned names will confirm their participation soon.

School participants will be invited to contribute to the discussions by presenting their own work in the form of posters and carry out either group or one-to-one discussions with the presenters. At the end of each day’s tutorials there will be panel discussions among the presenters and participants. Each day will conclude with a networking session that will assist the participants in carrying out discussions specific to the problems they are facing. The school also provides doctoral students with an excellent environment to either develop their own research or to build connections with other researchers.

**Hurry, as participation is limited to 200 seats only.** For details and registration, visit [http://ifip-tc12.digital-ecology.org/](http://ifip-tc12.digital-ecology.org/) or go direct to [Registration Form](#).
